

**Jan Grodek State University in Sanok
Institute of Agriculture and Forestry**

is pleased to invite you to participate in the

**International Scientific Conference entitled.
"Agroforestry - sustainable system of agricultural and forest
management"**

Arłamów, May 13 -15, 2024

The main objective of the conference is to disseminate up-to-date knowledge on agroforestry. Agroforestry is a set of agricultural practices where trees or shrubs are intentionally integrated with agricultural crops or animal husbandry in the same area (ICRAF - World Agroforestry). Agroforestry is an important regenerative agriculture practice that achieves greater product diversity with fewer non-farm inputs, while improving farm resilience to climate change.

Well-designed agroforestry systems, tailored to local conditions, can also increase biodiversity and ecosystem services at the landscape level. The implementation of agroforestry systems in Poland, as well as in Europe, can provide an opportunity for multi-directional rural development.

Scope of the conference:

Opportunities and barriers to the development of agro-forestry systems in Poland and Europe

Agro-forestry production as an alternative direction of rural development

The impact of agro-forestry systems on the formation of biodiversity
